

Ideation Phase: Empathize & Discover

Empathy Map Canvas

Date	03 October 2026
Developer	Vinay Krishna A K
Project Name	Automated Network Request Management in ServiceNow

Empathy Map Breakdown & User Analysis

- **Think & Feel:** Users care about getting access approved on time without administrative hurdles. They feel anxious about unknown request states and seek transparency.
- **Hear:** They hear feedback that manual requests take days to fulfill, and instructions from IT managers to supply complete connection IDs and security justifications.
- **See:** They see the centralized Service Portal (/sp) with the Network Request catalog item, dynamic fields changing on selection, and peers waiting on unautomated approvals.

- **Say & Do:** They fill out network request parameters online, provide justifications, and expect regular email alerts instead of manually chasing support teams.
- **Pain (Frustrations):** Lack of real-time visibility, form rejection due to missing connection details, and delayed approvals blocking work tasks.
- **Gain (Needs & Success):** Automated approval routing via Flow Designer, clear dynamic forms with Catalog UI Policies, and automated email notifications at each milestone.
