

Ideation Phase

Define Problem Statements

Date	03 October 2026
Developer	Vinay Krishna A K
Project Name	Automated Network Request Management in ServiceNow

Customer Problem Statements

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	End User (Requester)	Submit a network request for access or device configuration.	I experience long delays and have no real-time status updates.	Requests are handled through manual emails and lack centralized tracking.	Frustrated and blocked from completing work.
PS-2	Network Fulfilment Engineer	Configure and fulfill network requests accurately and quickly.	I waste time chasing missing details and manually re-entering data.	Submissions arrive with incomplete fields and no mandatory checks.	Overworked by administrative triage and prone to human errors.
PS-3	Designated Approver	Review and approve access changes in accordance with security policies.	I lack sufficient request context and clear audit tracking.	Approval requests are sent informally without policy enforcement gates.	Hesitant to approve quickly due to security and compliance risks.
PS-4	IT Platform	Maintain reliable request	I face high maintenance	Processes rely on fragmented	Overburdened by backlog

Administrator	routing, track SLAs, and ensure compliance.	effort and difficulty tracking end-to- end performance.	workflows without a structured database model.	and lacking operational oversight.

Implementation Resolutions in ServiceNow

- **End-User Experience (PS-1):** Delivered a centralized Network Request catalog item on Service Portal (/sp) with dynamic UI Policies and automated milestone email alerts.
- **Data Accuracy & Storage (PS-2):** Configured the custom table Database Tables (u_database_table) with client and server-side mandatory validation to eliminate incomplete submissions.
- **Approval Governance (PS-3):** Automated approval routing using Flow Designer's Ask for Approval action with an embedded Approval Request Related List for full auditability.
- **Operational Oversight (PS-4):** Implemented 100% low-code Flow Designer logic to create tasks, update states, and maintain real-time tracking dashboards without custom scripts.
