

Project Design Phase-II

Data Flow Diagram & User Stories

Date	03 October 2026
Developer / Student	Vinay Krishna A K
Project Name	Automated Network Request Management in ServiceNow

1. Data Flow Diagram (DFD)

Data Flow Description (ServiceNow Implementation):

- Step 1 (Ingestion):** The Requester submits the 'Network Request' catalog item via Service Portal (/sp) with User Name, Phone, Email, Mobile, Connection Type (New/Existing), Total Amount, Payment Mode (UPI/Card), and Address.

- **Step 2 & 3 (Trigger & Record Creation):** Service Catalog trigger runs Flow Designer. Step 1 gets catalog variables, Step 2 creates a new record in Database Tables (u_database_table), and Step 3 sends an acknowledgment email to the requester.
- **Step 4 (Approval Execution):** Step 4 executes 'Ask For Approval' on the newly created Database Tables record and notifies the designated approver.
- **Step 5 to 7 (Approved Branch):** If approved (true), Step 6 updates the Database Tables record status to Approved, and Step 7 sends an approval confirmation email to the requester.
- **Step 8 to 10 (Rejected Branch):** If rejected (false), Step 9 updates the Database Tables record status to Rejected, and Step 10 sends a rejection notification email to the requester.

2. User Stories & Acceptance Criteria

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Requester (User)	Service Portal Intake	USN-01	As a user, I want to submit a network request form on the Service Portal (/sp) so that I can request a new or existing network connection.	Network Request catalog item opens on /sp with contact, payment, and connection fields.	High	Sprint-1
Requester (User)	Dynamic Form Display	USN-02	As a user, I want the form to dynamically adjust based on connection and device choices so that I only fill out relevant fields.	UI policy reveals connection details based on selection (New vs Existing) and device details.	High	Sprint-1
Requester (User)	Submission Acknowledgment	USN-03	As a user, I want to receive an acknowledgment email right after submitting so that I know my request has been received.	Step 3 of Flow Designer sends an email with the submitted details and confirmation.	High	Sprint-1

Approver (Manager)	Approval Routing	USN-04	As an approver, I want to receive approval notifications with complete request parameters so that I can approve or reject the request.	Flow Step 4 triggers 'Ask For Approval' on the created Database Tables record.	High	Sprint-2
Requester (User)	Approval Outcome Alert	USN-05	As a user, I want to be notified by email when my request is approved or rejected so that I know the outcome.	True branch executes Step 7 (Approval Email); false branch executes Step 10 (Rejection Email).	High	Sprint-2
Administrator	Data Architecture	USN-06	As an administrator, I want request inputs stored directly into 'Database Tables' (u_database_table) so that records are maintained cleanly.	Step 2 creates a new record in u_database_table with Auto-Numbering.	High	Sprint-1
Administrator	Automated State Updates	USN-07	As an administrator, I want the record state in Database Tables to update automatically on approval or rejection without manual editing.	Step 6 sets state to Approved; Step 9 sets state to Rejected automatically.	Medium	Sprint-2
Administrator	Low-Code Maintainability	USN-08	As an administrator, I want workflows built entirely via Flow Designer so that I can easily debug execution logs without custom scripts.	Flow Execution Details show step-by-step progress, condition checks, and email logs.	Medium	Sprint-2
